Mr. G. Russell Lincoln
Algan, Inc.
16741 West Park Circle
Chagrin Falls, Ohio 44022

February 11, 1982

Dear Mr. Lincoln:

This letter is to confirm our telephone conversation on February 8, 1982, regarding the disposal of "heavy gelled printing ink vehicle" generated by your facility. In correspondence received from you on January 22, 1982, you indicated that this waste does not classify as a hazardous waste by virtue of EP Toxicity, Corrosivity or Reactivity. In addition, visual inspection of a waste sample by Melinda Becker of this office, and correspondence dated November 5, 1981, indicates that the material is in a rubbery, non-pourable physical state and has a solids concentration of 75 percent. It is also our understanding that you have approximately 120 drums of this material currently stockpiled at Algan, Inc. An additional 20-30 drums can be expected to be generated on a yearly basis hereafter.

Considering the above information, this office does not object to you disposing of this waste at the Inland Reclamation Landfill. However, there are several stipulations which are necessary to assure Ohio's Solid Waste Disposal Regulations are complied with. These are the following:

1. Drums in which the waste is to be delivered to the landfill must be of an open-top nature. If requested by the landfill operator, the lids must be removed prior to disposal.
2. The waste must be in a relatively solid state with no free standing liquid.
3. Drums must be deposited at the landfill where the operator specifies.
4. The waste must not cause any operational difficulties at the site.

Approval for disposing of this waste at the Inland Reclamation Landfill may be rescinded if any of the above items are violated. Please contact Mr. James Palladino of Inland Reclamation, Inc. (216) 439-3200 to arrange delivery and fee schedules.

If you have any questions, please do not hesitate to contact me.

Sincerely,

Jeff M. Harris
Solid Waste Scientist
